

## Notification of Update to CTO Stream – Re-submittable Reportable Events

CTO is pleased to announce a new feature which allows an existing Provincial or Centre Reportable Event form to be updated with new information and re-submitted to the REB.

Instead of creating a brand-new reportable event form to provide follow-up information on a previously submitted event, research teams can unlock, edit and re-submit the original reportable event form. Sign-off from the appropriate signatory will be required before the form can be re-submitted to the REB for review. Once submitted, the REB will be able to review the updated form and issue a new review letter which research teams can access through the History tab.

You can find the Quick Guide explaining how to use this new feature through the CTO Stream Help Menu or on the [CTO Website](#).

**This new feature will be live in CTO Stream on December 13, 2018.**

Please feel free to contact the Help Desk if you have any questions.
